TOPLOCK

Glass cleaning

TopLock

The TopLock glass cleaning range offers innovative quality products to meet the highest professional standards. Working with TopLock guarantees streak-free cleanliness even high up and in hard-to-reach areas.

TopLock was developed with a particular eye on ergonomics and user-friendliness. High-quality materials such as profiled aluminium, glass fibre reinforced plastic, stainless steel and carbon are

technically enhanced and fashioned with absolute precision. A cleverly thought-out attachment system guarantees secure guidance of the stick and fast setting.

TopLock glass cleaning systems impressively combine economy, quality, ergonomics and functionality. And what's more – and typically VERMOP – constant further development, first-class service and delivery dependability. All this makes TopLock the crystal clear recommendation for cleaning professionals.

TopLock – Range

LockStrip soaper

The range of LockStrip soapers offers the ideal solution for every cleaning profile. The cover of synthetic plush with microfibre can absorb a large quantity of cleaning liquid and as a result permits even distribution, even over large panes. Thanks to the optimum fit, every LockStrip soaper sits perfectly and without slipping onto the TopLock soaper carrier.

A model version with a scratch-free pad for removing stubborn dirt is also available.

TopLock soaper carrier

The TopLock soaper carrier is equipped with a special ergonomic grip. The rubberized material makes it possible to work quickly and precisely without slipping. The grip is ideally dimensioned for ergonomic handling without coming into contact with the soaper.

TopLock quiver

An indispensable utensil for professional glass cleaning: The TopLock quiver holds the wiper and soaper and makes drip-free working possible without a bucket. The belt with a fast release function ensures both a firm hold and a comfortable feeling when wearing.

Range – TopLock

TopLock wiper blades

The material of the TopLock wiper blades combines the smooth running of a soft rubber quality with the durability of hard rubber. As a result, the same wiper blade can be used in all kinds of weather.

Release button

Thanks to the easy-to-use release button, the rails in the wiper grip can be adjusted or changed simply and quickly. No wobbling, no slipping: the notches in the LockHead guarantee that the rail sits firmly. This also applies for the non-slip secured blades.

Rails

The TopLock rails can be effortlessly adjusted or replaced and sit perfectly with just one flick of the wrist. Thanks to the notches, the rails are set securely in every position on the LockHead wiper grip.

LockHead wiper

The length of the LockHead wiper is ideally dimensioned for ergonomic handling, without having to touch the soap. The very light grip guarantees precise, fatigue-free work. The non-slip rubberized grip guarantees problem-free and safe use, even with wet hands. The rails can be adjusted or replaced simply and quickly and still sit reliably securely in the grip.

TopLock – Range

TopLock telescopic sticks

The TopLock telescopic sticks are particularly light, very flexible, secure in use and therefore ideally suited for every application. Their attachment system makes a convincing impression through simple handling and precision. The innovative inner locking cuts out laborious screwing in and releasing of the cap nut. Just a quarter turn of the stick is enough to set it in any position. Even at maximum length, the TopLock telescopic stick fits smoothly and precisely into the guide rod. The interplay of the extender wheel with the profiled inner pipe therefore generates such a high level of flat wringer pressure that the stick can withstand a traction and pressure force of 60 kp. Thanks to this system, it is easy to retract and extend, without falling in when released. Integrated stoppers prevent the fingers being nipped when the stick is being retracted.

Pro cone with Pinocchio safety button

The pro cone with the Pinocchio safety button creates the desired secure connection and ensures a firm fit.

Range – TopLock

Glassman safety scraper

The Glassman safety scraper with the 10 cm wide blade made of Solingen steel is ideal for removing stickers, paint residue or encrusted dirt from glass and ceran. The Blade Change Security System (BCS) guarantees simple, fast and safe blade changes. The locked protective cap sits securely over the blade and minimises the danger of injuries. Furthermore, applied as a handle, it also offers optimum power transmission.

TopLock Indoor Aquasoft

TopLock Indoor Aquasoft – interior cleaning appliance

The special TopLock Indoor Aquasoft appliance opens up new possibilities for interior cleaning: Demineralised water loosens the dirt which can then be lifted off with the Textronic microfibre high-quality pad. This makes the use of cleaning chemicals unnecessary. The water-bearing telescopic stick made of carbon, combined with the water-repelling, breathable belt, make glass cleaning a pleasure. Specific dirt removal and the no-smear drying guarantees a huge time saving. There is no more soiling of window frames and floors through splashed cleaning water.

TopLock Indoor Aquasoft not only provides a convincing cleaning result, but also a professional appearance for the cleaning operative.

Benefits:

- Non-drip
- Economical (less water, no chemicals)
- Ergonomic for every cleaning operative

Areas of use in interior cleaning:

- Glass panes
- Mirrors
- Glass partitions
- Display windows in shopping centres

TopLock Indoor Aquasoft

1. Belt

The light belt offers a comfortable feel when worn and is lined with skin-friendly, air-permeable 3D net material. The pockets for pads, motor/batteries and fresh water bottle are securely attached to the belt so that they don't slip even when the wearer is walking or kneeling. The flexible fast-release lock permits quick and individual size adjustment.

2. Fresh water bottle

The fresh water bottle holds up to 0.5 l demineralised water for effective interior cleaning. Therefore, thanks to the low consumption, cleaning operatives can work for many hours without having to change or replenish the liquid.

3. Water-bearing stick

The water-bearing telescopic stick is made of carbon. This makes it extremely light and comfortable to hold. Height adjustment and setting is carried out with an intuitive and easy-to-use locking system.

4. Pad

The Textronic microfibre high-performance pad removes light soiling, for example finger marks, quickly and simply. The clip-on holder allows different pad holders to be attached quickly and simply for all circumstances. The flexible joint ensures that even hard-to-access places can be reached easily.

5. Battery

The lithium-ion battery provides power to the Indoor Aquasoft and allows for a number of hours work. The battery pack can be reliably recharged at any time using the charger.

6. Motor/Pump

The motor of the Indoor Aquasoft works efficiently and particularly quietly. As a result, such premises as offices can easily be cleaned without causing a disturbance, even during working hours.
